The unique protection for concrete - non-toxic

International Awards - komsol® 2019 2020 2021 2022 2023 2024

For decades, **komsol®** has received awards in many countries for being a "Gamechanger" where **Innerseal®** and **Topseal®** are 100% non-toxic products that replace all existing toxic products that affect our health and the climate.

We have selected some awards from the last few years we have received in Europe. At the bottom of this page we have included the 2023 award from the USA, which is the highest award outside the EU. We receive the awards not only because **Innerseal®** and **Topseal®** are non-toxic but because the products have unique properties that no other product known to us and are used where the highest demands are made. All the extra tests prove this.

komsol®
Concrete Protection & Waterproofing

Best Professional Waterproofing Specialists 2019 - Europe

Thanks to its longstanding reputation for excellence and innovative product offering, Komsol Group has become a key player in the global waterproofing market, providing the benefit of its wisdom and knowledge to clients around the world. As we showcase some of this year's winners from the Construction and Engineering Awards, we tell it was important to showcase this dynamic company and the creative solutions it offers to ensure quality waterproofing for a variety of applications throughout the construction market.

Since it first began, Komsol has been working with protection from damp, waterproofing and hardening the surface of concrete, plaster and brick.

Today, the firm's innovative products and methods counteract both the chemical and mechanical deterioration of concrete.

Having achieved incredible success over the years, the group now boasts an international presence, with both its own offices and a network of partners across Europe, Africa, South America, the Middle East and Asia. With the help of authorized contractors worldwide, the group's innovative products and methods reach out all the way to local projects.

Each and every one of Komsol's operative and mobile teams have unique specialist competence and long experience of preventive protection and damp related problems in various structures. As such, they are able to meet the varied needs of clients and ensure excellence for everyone the group supports. Acting as an international distributor for Control Innersseal and Control Topseal, Komsol is able to offer clients the benefits of these innovative solutions. For more than 45 years these solutions have been on the market, protecting against and solving most damp problems in a wide range of buildings, from private homes and swimming pools to bridges and oil platforms built in concrete.

This creative technology was originally developed during the 1980s in connection with the construction of the Norwegian Condeep concrete oil platforms. The platforms are still standing in the severe climate of the North Sea today. Komsol has developed the technology further, into the world beating products for the waterproofing and hydrophobing of concrete that are now on offer to international clients. These silicone-based, environmentally friendly products are used today in many different contexts to prolong the useful life and to lower the maintenance costs for old as well as new concrete and brick constructions.

When applied to a surface, Control Innersseal and Control Topseal become an integral part of the concrete, forming a complete body of strength and durability, as well as other numerous benefits to the private home owner and businesses including resisting a variety of blights on surfaces such as freeze-thaw cycles, corrosion of reinforcement steel, aggressive sub-soil waters, sea water, carbonates, chlorides, sulphates and nitrates.

Ultimately, the future is bright for Komsol as it seeks to continue developing and enhancing its unique solutions for the benefit of even more clients around the world and throughout the corporate, industrial and residential landscapes.

komsol®
Concrete Protection & Waterproofing

BUILD 2019 Construction & Engineering Awards

komsol®
Concrete Protection & Waterproofing

Best Professional Waterproofing Specialists 2019 - Europe

Gracias a la extensa reputación de sus excelentes e innovativos productos. El Grupo Komsol ha recibido una distinción en el mercado global de la impermeabilización, proporcionando el beneficio de su experiencia y conocimiento a clientes alrededor del mundo. Como hemos presentado a algunos ganadores de este año del Construction and Engineering Awards, sentimos que es importante presentar a esta dinámica compañía y sus soluciones creativas que ofrecen para la impermeabilización con una variedad de aplicaciones en el mercado de la construcción.

Desde sus comienzos, Komsol ha estado trabajando en la protección de la humedad, impermeabilización y endurecimiento de superficies de hormigón, escayotas y ladrillos.

Al día de la fecha, los productos innovativos y métodos de esta empresa contrarrestan las deterioraciones químicas y mecánicas del hormigón.

Habiendo logrado numerosos éxitos durante los años, el grupo puede mostrar actualmente de una presencia internacional, con dos oficinas propias y una red de socios repartidos por Europa, África, Sudamérica, el Medio Oriente y Asia. Con la ayuda de contratistas autorizados en todo el mundo, los productos innovativos del grupo y sus métodos alcanzan el camino para los proyectos locales.

Cada uno y todos los equipos operativos y móviles de Komsol tienen una especialización única y competente, y tienen una larga experiencia en protección preventiva y problemas de humedad. En todo caso, están en condiciones de satisfacer las variadas necesidades de los clientes y garantizarla para todos por el apoyo del grupo. Actuando como distribuidor internacional de Control Innersseal y Control Topseal, Komsol está en condiciones de ofrecer a sus clientes los beneficios de estas innovativas soluciones. Por más de 45 años estas soluciones se hallan en el mercado, protegiendo y solucionando la mayoría de los problemas de humedad en un amplio espectro de construcciones, desde casa particulares y piscinas hasta puentes y plataformas petrolíferas.

Esta tecnología creativa se empezó a desarrollar originalmente durante la década de 1980 en relación con la construcción de las plataformas petrolíferas de hormigón Condeep de Noruega. Estas plataformas siguen en pie al día de la fecha expuestas a las severas condiciones climáticas del Mar del Norte. Komsol ha seguido desarrollando esta tecnología, introduciendo en el mercado productos de impermeabilización e hidrofobia para el hormigón, los cuales se ofrecen actualmente a clientes internacionales. Estos productos a base de silicatos, respetuosos con el medio ambiente se usan actualmente en varias situaciones para prolongar la vida útil y reducir los costes de mantenimiento tanto para construcciones de hormigón y ladrillos antiguos así como de nuevas.

Aplicados sobre la superficie, Control Innersseal y Control Topseal reciben parte íntegra del hormigón, formando un cuerpo completo en fuerza y durabilidad, así como otros numerosos beneficios en las propiedades particulares y comerciales, incluyendo la resistencia a roturas en superficies generadas por ciclo de heladas y deshielos, corrosión del armazón del hormigón, aguas subterráneas agresivas, aguas marítimas, carbonatos, cloruros, sulfatos y nitratos.

Finalmente, el futuro para Komsol es brillante dado que continúan desarrollando e implementando sus soluciones únicas para el beneficio de más clientes alrededor del mundo y en todo tipo de paisajes corporativos, industriales y residenciales.
